

Panel Blind Installation Guide

Checklist: You will need the following to perform the installation.

- Drill with hammer function for masonry (with 5.5mm drill bit).
- Screwdriver (Phillips)
- Measuring tape
- Marker (pencil)
- Ruler (recommended)
- Step ladder
- Spirit level (recommended)
- Hammer (not required but ideal)
- Vacuum to clean dust from drilling

Note.

For wallboard or plaster: Use hollow wall anchors for added support (not supplied).

For concrete, stone, brick or tile: Use an appropriate drill bit (not supplied) and screws/plugs (provided).

For metal surfaces: Pre-drill holes before fastening the screws.

Parts

Facefix (Outside) Mounting Bracket
Hanging your blind:

Pelmet Bracket

Recess (Inside Mounting Bracket)

Step1.

Before starting you need to decide if the blind is an Inside (Recess) or Outside (Facefix) blind installation. This will determine your blind position. Remember if Inside (Recess) you should ensure the blinds will not be obstructed but obstructions like window handles or burglar bars for example.

Step2.

Inside window frame (Reveal fix)

Measure the distance that any handles protrude from the frame. Mark this measurement on the lintel (top inside portion of window frame) and use it to position the back of the bracket. Mark the position of holes. Drill the holes. Then screw bracket into lintel using screws and raw plugs supplied.

Use mounting clips to secure headrail on the inside mounts. The centre of the mounting clip aligns with the centre of the louver carrier stem.

Outside window frame (Face Fix)

Standard wall brackets are adjustable and provide 5cm wall clearance.

Determine the height for the top of the bracket (measured from the floor) by adding 1/2" to the blind height including the headrail. When installed, louvers will clear the floor.

Attach the Clip to the Facefix Bracket, before installing.

Step 3.

Mark the drilling positions. Then drill the marked positions. Screw bracket in place. Use raw plugs if fitting to the wall. With the bracket arm positioned as shown below, you then screw the bracket onto the headrail.

Step 4.

Remove the Panels from their packaging. Then mount each panel onto the Velcro strip on top of the headrail.

Step 5.

This applies to the Facefix Panel Blind.

Once all the panels are in position.

- Attach the Pelmet Bracket to the Pelmet.
- You can then mount the Valance/Pelmet to the top of the headrail.
